

Sprint 6 Retrospective

🕒 Recommended time: ~15-20 minutes (solo review) 👤 Works best with: Individual contributor

Overview:

This sprint focused on completing the final core features of the application, including task sorting and export capabilities. The goal was to improve data visibility and task management flexibility, preparing the app for production-readiness.

Ground rules:

This is a safe space for openly sharing feedback:

- Maintain scope discipline
- Keep UI intuitive and exports simple
- Finish strong: wrap all open tasks from backlog
- Finalize GitHub and documentation sync

✔ Good

🚀

Smooth implementation of CSV and PDF export features

🔧

Codebase remained clean and modular

📁

Tasks sorted dynamically without breaking filtering logic

📅

Realistic simulation of complete Agile sprint

📄

Final documentation was fully structured and detailed

❌ Bad / could be better

📄

Export layout in PDF could use styling enhancements

🔧

Lack of unit tests (was not in scope, but noted for future)

📄

Limited user controls for export (e.g., filter before export)

💡 Ideas

💡

Add a toggle to export only selected status (To Do / Done)

💡

Create a compact view for printing tasks

💡

Refactor export logic into a shared utility service

🔥 Actions
