

Sprint 5 Retrospective

🕒 Recommended time: ~15-20 minutes (solo review) 👤 Works best with: Individual contributor

Overview:

Sprint 5 focused on visual refinements and accessibility. The goal was to improve the UI layout and styling consistency, support theming for future flexibility, and group task views for better usability.

Ground rules:

This is a safe space for openly sharing feedback:

- Be honest, but constructive
- Focus on actions, not individuals
- Celebrate progress, identify blockers
- Keep it short and useful

✅ Good

- ★ Added Angular Material cards to group task sections (To Do, In Progress, Done)
- 🔧 Refactored CSS using var() to support dynamic light/dark themes
- 📌 Priority border colors now work consistently for all tasks
- 💡 Layout is cleaner, easier to follow, and visually modern

🚩 Bad / could be better

- 💡 Theme toggle feature could be added later (currently manual)
- ⚙️ Had to troubleshoot CSS overrides and Angular class binding
- 🔍 Several UI fixes required multiple passes — initial assumptions were off

💡 Ideas

- 🌈 Add button to toggle between light and dark theme
- 📄 Start implementing export features (CSV/PDF)
- 🔄 Explore animations or transitions to enhance UX

🔑 Actions

- ✅ Track a working theme toggle button for Sprint 6
- ✅ Add task sorting and export to upcoming sprint
- 🌱 Refactor task list styles into reusable SCSS partials (optional)
