Project Vision – Personal Task Manager

🎯 Project Vision

Personal Task Manager is a lightweight web application designed to help individuals organize and manage their daily tasks efficiently. Built with Angular, it allows users to create, prioritize, and track their tasks in a clean, user-friendly interface.

🔍 Objectives

- Showcase Angular development skills (component-based architecture, services, routing)
- Demonstrate Agile project flow using Jira and Confluence
- Build a portfolio-ready GitHub repository with proper documentation

💡 Target Users

Anyone who needs a personal productivity tool to manage simple daily tasks — without the complexity of a full project management system.

🔧 Scope (Initial Release)

- Add, view, delete tasks
- Task details: title, description, due date, status
- Status-based grouping (To Do, In Progress, Done)
